NEW DAMAGES

In May 2017, in connection with the flare up of military activities in many villages along the contact line, the projection regarding the expected number of newly damaged houses throughout the year had to be increased by four times, to 1,000 units. The count at the end of the year - 1,052 - has confirmed the reliability of the projection. The breakdown by type of damage confirms the distribution observed in the previous years: 56% light damage (part of the roof; some windows); 27% medium damage (whole roof, several windows); 14% heavy damage (structural parts of the house); 3% total destruction.

WINTERIZATION

In light of an expected lower commitment in the winterization response a decline in the coverage compared to the previous year, in particular NGCA has flagged since the beginning of the year had to be increased by four times, to 1,000 units. The count at the end of the year - 1,052 - has confirmed the reliability of the projection.
